

WORK SMARTER SIMPLIFY SCCM

SoftwareCentral

AD Module

Enable helpdesk and supporters to respond to user requests faster, more efficient and more secure than ever before

Reset passwords, manage users and groups fast and scope based

IT staff has to have the correct permissions on a need-to basis. Assigning and revoking user rights is time consuming and complex.

Managing Active Directory users, password, group memberships and organizational units are typical daily operations within all IT departments. Providing IT staff with enough but not too many rights is a continuous task. Assigning permissions to users is also a complex task.

- IT staff has to have the correct permissions on a need-to basis
- Assigning and revoking user rights is time consuming and complex

How can the SoftwareCentral Active Directory module help?

The Active Directory module provides IT staff with just the right amount of permissions to do their daily operations. Limited access to only certain parts of the AD, organization, or users.

Reset user password with ease

Assign rights to users that are revoked automatically after a scheduled time-span. Example: If a user wants to work from home and needs to connect a printer to the computer you can assign local administrative privileges that are automatically revoked after 4 hours

Key benefits and features of SoftwareCentral Active Directory Module

- ✓ IT staff can be limited to certain parts of the AD – operate securely
- ✓ Manage Groups membership – scoped by security role
- ✓ Lease administrative privileges to users – Automatic revocation
- ✓ Manage AD Computers, OUs and users – scoped by security role
- ✓ Manage and setup reports for Local computer groups

Try it for yourself with a free 30 day trial – no strings attached and no credit card needed.
