SoftwareCentral

End User Scheduler

Simplify large-scale deployment projects with SoftwareCentral End User Scheduler (EUS)

Installing large updates without interrupting business operations

Windows computers need to be updated within a limited time frame. Inconvenient timed updates disturb your business operations.

Deploying Windows and Windows updates to a large number of clients requires planning and collaboration with users to ensure minimal disturbance to their daily workflow. Keeping Windows secure and up to date is very important in all organizations.

- Windows computers need to be updated within a limited time frame
- Inconvenient timed updates disturb the users
- Impact on business operations needs to be minimized
- Special equipment computers may need special handling
- Planning deployments requires knowledge and resources

SoftwareCentral EUS keeps the business online and the users in charge

SoftwareCentral End User Scheduler enables users to plan when to update their devices.

Users will be notified that an update is necessary and will have the option to run the update right away or schedule the update for a more convenient time. It will even be booked in the user's outlook calendar.

Time spent on deployment planning is heavily reduced and user satisfaction is increased by factors. Users operating computers running special equipment can opt-out of updates and the IT department will receive the opt-out reasoning.

Key benefits and features of SoftwareCentral End User Scheduler

- ✓ Low impact on business operations
- ✓ Planning is reduced
- ✓ Deployments are done within a set time frame
- ✓ User satisfaction is increased
- ✓ Rework is heavily reduced

Scheduled Windows Installation
