## SoftwareCentral Plus

## Keep your application portfolio secure and up-to-date with the latest releases and security updates

### Struggling to keep up with software updates and running a secure platform?

IT organizations faces challenges every day to keep the platform secure and up to date. Software vendors updates applications with security patches and bug fixes at an ever increasing rate.

Users request the newest full featured application version, and it is a struggle for IT departments to keep up.

Scanning the software portfolio for new updates, packaging the installations, testing and replacing old software with newer versions requires expert knowledge and is time consuming, expensive and a repetitive operation that takes many resources to do properly and timely.

### How can SoftwareCentral Plus help?

SoftwareCentral Plus is a subscription service that delivers installation packages for all new releases of over 80 common applications. Each time a software vendor releases a new version of an application it is examined by our packaging experts who develops instal-

lation packages that are designed for automatic and silent installation.

The installation packages are tested and verified on supported Windows platforms ensuring an easy and secure deployment of the new software. Customers can subscribe to individual software products and will receive a notification whenever new versions are available.

### Special benefits for SoftwareCentral subscribers - Automatic update with Auto Update Plus!

Whenever a new software version is available in SoftwareCentral Plus the installation package is downloaded and imported into the SCCM server based on the customers own application template ensuring correct settings and behaviors.

It is then automatically deployed to test computers and Auto Update Plus checks the installation status on all test computers and notifies the IT administrators of the success rate in an e-mail.

### Key benefits and features of SoftwareCentral Plus

✓ Get notified when new versions or updates are available

✓ Professional installation packages

✓ Tested on supported Windows Platforms

✓ Zero touch import into the SCCM server with preferred settings

Try it for yourself with a free 30 day trial – no strings attached and no credit card needed.

**Over 80 applications ready for deployment**

**Applications always up to date**

**Secure platform with patched software**

**Unlimited downloads**

**FREE TRIAL**
